The invention relates to zaigi3-like peptides and their corresponding nucleic acids and methods for modulating gastric contractility, nutrient uptake, growth hormones, secretion of digestive enzymes and hormones. The sequences of the invention are used in the prevention, diagnosis and treatment of diseases associated with inappropriate ZSIG33 expression. The nucleic acids of the invention and their complements are used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The ZSIG33 peptides are used as antigens in the production of antibodies against ZSIG33 and in assays to identify modulators of ZSIG33 expression and activity. The anti-ZSIG33 antibodies are used to down regulate expression and activity. The anti-ZSIG33 antibodies are also used as diagnostic agents for detecting the presence of ZSIG31 in samples (e.g. by enzyme linked immunosorbent assays (ELISA)). The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and hormones, and/or secretion of enzymes and zsig33-like peptide is used in protein therapy. The present sequence is human zsig33 protein.
ZSIG33-Like peptides and polynucleotides, useful for modulating gastric contractility, nutrient uptake, growth hormones and/or secretion of digestive/pancreatic enzymes and hormones -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; zsig33-11ke peptide; ZS33LP; immunity; developmental process; infection; human immunodeficiency virus; vaccine; anthypoglycaemic; adsorption enhancer; gastrointestinal disease; growth related disease; inflammation; gene therapy; growth regulation; blood vessel formation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                                                                  The present sequence represents human zsig33. The specification describes a short gastrointestinal peptide (SGIP), which is derived from zsig33. SGIP has homology to motilin. The SGIP peptide may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate SGIP expression. For example, SGIP may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of SGIP by SGIP. SGIP may also be used as an antigen in the production of antibodies against SGIP and in assays to identify modulators of SGIP expression and activity. The anti-SGIP antibodies, agonists and antibodies may also be used to regulate expression and activity. The anti-SGIP antibodies, agonists and antibodies may also be used as diagnostic agents for detecting the presence of SGIP in samples.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         30-NOV-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         30-NOV-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         02-DEC-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          16-DEC-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 08-NOV-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-DEC-1
The invention relates to zsigi3-like peptides (zsigib) including zsigi3-linker, zsigi3-beta, zsigi3-gamma, zsigi3-delta and zsigi3-linker, zsigi3-beta, zsigi3-gamma, zsigi3-delta and zsigi3-linker, zsigi3-beta, zsigi3-gamma, zsigi3-delta and zsigi3-like peptides activate the immune system in boosting immunity to infectious diseases, treating immunocompromised patients such as human immunodeficiency virus (HIV) patients, in other developmental processes. They are useful for evaluating functions of hypothalams-pitulitary-adreal axis, to modulate containing functions of hypothalams-pitulitary-adreal axis, to modulate growth and/or differentiation of tumour cells, as additives to anti-chanancers for oral drugs which require fast nutrient action and to stimulate glucose-induced insulin release. They are also useful as containing glucose and as adsorption channers for the expansion, differentiation, growth factor and hormone secretion and/or cell-cell interactions of tissues associated with gastrointestinal system, brain and central nervous system. These molecules are useful for treating dysfunction associated with contractile tissues associated diseases. ZS331p peptides, nucleic acids and/or antibodies are useful for treating disorders associated the more and acids and contractility, secretion of diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       hormone and acids, secretion of hormones in the pancreas and/or brain, agastrointestinal motility, recruitment of digestive enzymes, inflammation and regulation of nutrient absorption. Sequences of the invention are useful in gene therapy. The present sequence is human zsig33 protein.
                                                             New polypeptides, useful for modulating gastric contractility, nutrient uptake, pancreatic secretion of hormones, digestive enzymes and treating gastrointestinal and growth related diseases, comprises ssign3-like peptides -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                  2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking blooctive molecules to cells expressing PRO polypeptides, for indulating blooctive molecules to cells expressing PRO polypeptides, and for for identifying agonists or antagonists.

The PRO polypeptides are useful for for stimulating the researce of tumour necrosis factor (TNF)-alpha from human blood, for stimulating the proliferation or differentiation of chondrocytes, and detecting the presence of tumours. The polynucleotide sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for generating transgenic animals or knockout animals, for the generation of generating transgenic animals or PRO polypeptides of the invention.

PRO polypeptides of the invention.

PRO polypeptides of the invention.

Note: The sequence data for this patent was obtained in electronic format directly from the USPTO web site at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gao W;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 therapy, in chromosome and gene mapping, as chromosome markers, in tissue typing, and in chromosome identification

18-FEB-2000; 18-FEB-2000; 22-FEB-2000;

ò g under American Type Culture Collection (ATCC) accession number in a list given in the specification. Also included are vectors and host cells for producing PRO proteins, PRO fusion proteins, anti-PRO antibodies, PRO extracellular domains and mature sequences, methods of detecting PRO proteins, methods for stimulating the release of TNF-alpha (tumour necrosis factor alpha) from human blood, and the proliferation of differentiation of chondrocyte cells, the proliferation of conditional the release or proteins from cartilage, proliferation of inner ear urticular supporting cells, the proliferation of T-lymphocyte cells, the release or proliferation of endothelial cells, a method for modulating the uptake of a cytokine from peripheral blood mononclear cells (PBMC), or the proliferation of endothelial cells, a method for modulating the uptake of glucose or free fatty acid (FFA) by skeletal muscle cells, a method for inhibiting the binding of A-peptide to factor VIIA, or the differentiation of adipocyte cells, a method for detecting the presence of a tumour in a mammal and an oligonucleotide probe derived from any of the nucledic acids and any of the nucleic sequences cited above. The nucleic acids and an oligonate and any of the nucleic acids and an oligonate and an animal and an oligonate acids and an oligonate acids and an oligonate acids and an acid and an animal and an oligonate acids and an acid and an acid and an acid acids and aci

```
New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DeForge L, Desnoyers L, Filvaroff E, G. ```

The invention relates to an isolated nucleic acid comprising, or which is at least 80% identical to, or the full-length coding sequence of, any of the 275 nucleotide sequences, encoding the corresponding PRO polypeptide (one of 275 secreted or transmebrane proteins). The nucleic acid further comprises the full-length coding sequence of the DNA deposited

Claim 12; Fig 442; 659pp; English.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (DEC-1999) to the EMBL/GenBank/DDBJ databases.

-- FUNCTION: Specific ligand for the growth hormone secretagogue
receptor type I (GHSR) inducing the release of growth hormone from
the pituitary. Has an appetite-stimulating effect, induces
addposity and stimulates gastric acid secretion. Involved in
growth regulation (By similarity).

-- SUBCELLULAR LOCATION: Secreted (By similarity).
-- SUBCELLULAR LOCATION: Secreted (By similarity).
-- SIMILARITY: BELONGS TO THE MOTILIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SIMILARITY)

"Ex-FABP: a fatty acid binding lipocalin developmentally regulated in chicken endochondral bone formation and myogenesis.";
Biochim. Biophys. Acta 1482.127-135(2000).
-!- FUNCTION: Preferentially binds long-chain unsaturated fatty acids such as linoleic acid, oleic acid, arachidonic acid. Also binds with a lower affinity long chain saturated fatty acids such as steraic acid. May act as survival protein by playing a role in maintaining cell viability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   EXTRACELLULAR FATTY ACID BINDING PROTEIN.

"Complete genome sequence of Methanobacterium thermoautotrophicum
deltaH: functional analysis and comparative genomics.";
J. Bacteriol. 179:7135-7155(1997).
-!- FUNCTION: IGPS catalyzes the conversion of PRFAR and glutamine
amidotransferase activity that produces the ammonia necessary to
hisF for the synthesis of IGP and AICAR (By similarity).
C. -!- CATALYTIC ACTIVITY: 5-[(5-phosphor-1-deoxyribulos-1-carboxamide + L-glutamine - inidazole-glycerol phosphate + 5-
aminoinidazol-ylatamine - inidazole-glycerol phosphate + H(2)O.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PATHWAY: Histidine biosynthesis; fifth step. SUBUNIT: Heterodimer of hisH and hisF (By similarity). SUBCELLULAR LOCATION: Cytoplasmic (By similarity). SIMILARITY: Contains 1 type-1 glutamine amidotransferase domain.
                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       16-OCT-2001 (Rel. 40, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Stapleton M., Carlson J.W., Brokstein P., Yu C., Champe M., George R.A., Guarin H., Kronmiller B., Pacleb J.M., Park                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Hayashi H., Hamada S.;
"The genome of Invasive Streptococcus pyogenes; a comparative analysis of S. pyogenes SSI-1, SF370 and MGASB322.",
Submitted (MAY-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Part of an ATP-driven transport system for a metal; this protein has affinity for Zn(II), Fe(III) and Cu(II).
-!- SUBCELLULAR LOCATION: Attached to the membrane by a lipid anchor.
-!- SIMILARITY: Belongs to the bacterial solute-binding protein family 9. Lipoprotein receptor antigen (Lrai) subfamily.
SEQUENCE FROM N.A., SEQUENCE OF 30-39, AND CHARACTERIZATION.
STRAIN-SF370 / ATCC 700294 / Serotype M1, and AP1 / Serotype M1;
MEDLINE-20032372: PubMed-10564501.
